

Stallios

Pitch-deck for series A funding  
For accredited investors only

## Introduction

We present Stallios Inc. A next-gen tech startup founded in Canada in 2013, with the mission of creating a new generation of innovative and futuristic super-products capable of bringing more value to our lives, and solving some problems that we face on our beautiful planet.

Stallios is a bold project engineered over a decade that required trailblazing design and engineering to finally succeed at creating an AI super-platform offering a world wide web alternative to the world. The AI infrastructure is now in full production mode. All our users are totally impressed and delighted by what they see, and we've started to generate revenue.

We're now looking for funding partners to scale Stallios globally via a series A round, and eventually become public via an IPO. We need the funds to cover our expansion needs, such as global marketing, staff salaries, and business expenses. Regarding the amount, and because of the broad nature of Stallios, we're looking for around \$100 million and up if possible. Stallios offers 1 billion preferred shares at \$1000 per share following Meta Inc's share price range, with fixed dividends of 10% or \$100 per year. We invite you to read our pitch-deck herein to have more details about Stallios, and even become a new shareholder.

## The problem

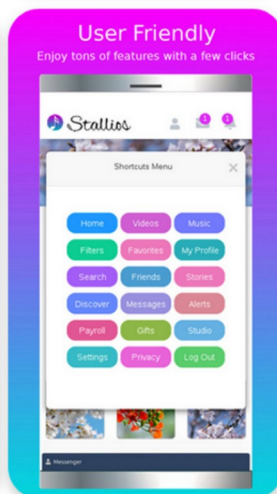

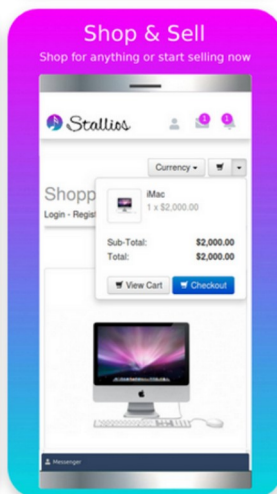

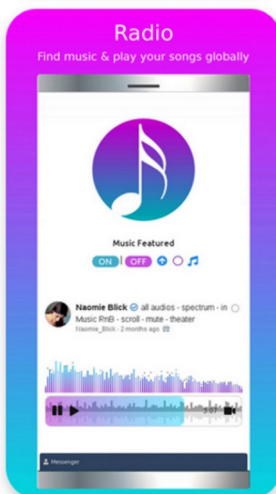

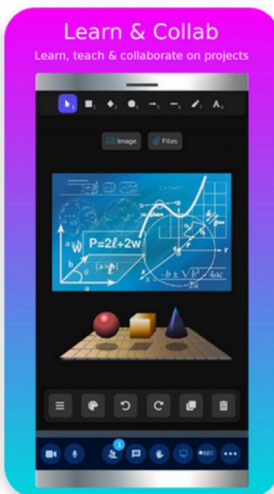

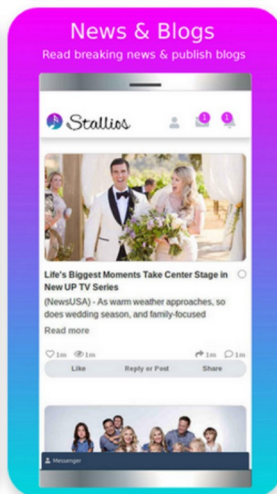

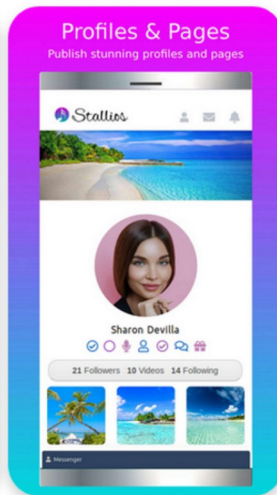

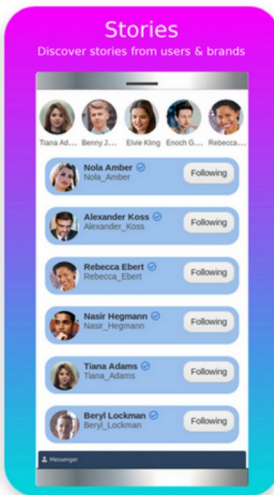

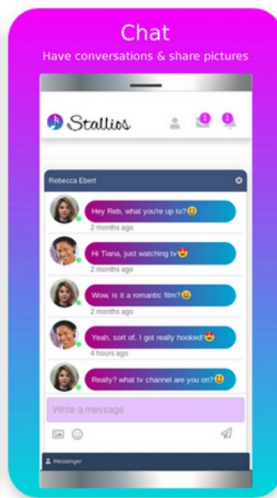

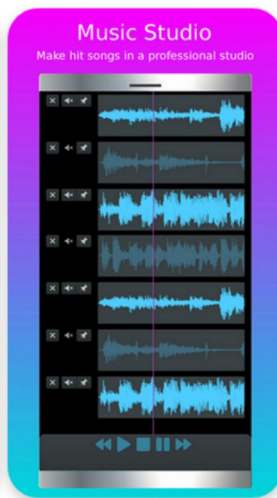

Everyone agrees that the current world wide web is a fantastic place to explore, socialize, shop, do business, and be entertained. However, everyone also agrees that the world wide web has zero security, too much toxic content, too many troublesome bots, too many hackers asking for ransom, and that it's an extremely unsafe place for teenagers, and for any individual with a vulnerable personality. Now in 2025, it's about time to evolve and finally offer a better world wide web to the world, as a free alternative. Something cleaner, refreshing, appealing, inspiring, fascinating, and a lot more secure for everyone.

## The solution

We're presenting Stallios as a free alternative to solve this problem. Stallios is an advanced social network super-platform, engineered to consolidate modern social media into one appealing and refreshing web-3.0 AI infrastructure, that offers everything we need on the web. Such as: advanced social media, chat, video-meetings, blogging, jobs, local search, apps and games publishing, e-commerce, business management, marketing, entertainment, e-learning, fintech, healthcare assistance, and super-AI assistance. The striking reality is that everyone on earth, even you the reader, feel the need for such a world wide web alternative. However, because of the complexity of such a project, it didn't exist. We've created it. Visit Stallios [here](#).

## The main web-3.0 AI infrastructure

The first page below displays the main features of the Stallios web-3.0 AI infrastructure, and the second page displays 3 demos of Hollywood studio shows created with a phone. Below that, you'll find the super-AI, the healthcare system, and the super-OS interface.

## The integrated super-AI system

Stallios also offers AI assistance via Mayca. A smart, seamless, and futuristic virtual-human super-AI system with vision and speech. Mayca is the AI system that everyone dreams about, but that no AI company seems to have enough creativity to create. Because creating this type of super-AI requires trailblazing creativity, and we've got that at Stallios. See the demo [here](#).

## The integrated healthcare assistance

Stallios offers healthcare assistance via Medicsis. An advanced healthcare system integrated with AI, especially engineered to offer vocal healthcare assistance from home, office, and outdoors. Medicsis offers interactive self-service healthcare assistance to everyone via a user-friendly question-answer interface that allows anyone to get an instant diagnosis of their medical problems by selecting their symptoms. Medicsis is an advanced medical system that can be used by individuals, including by clinics and hospitals. See the video demo [here](#).

Do you have "fatigue and tiredness"?	<input type="radio"/> Yes	<input type="radio"/> No
Do you have "increased hunger and thirst"?	<input type="radio"/> Yes	<input type="radio"/> No
Do you have "need for peeing very often"?	<input type="radio"/> Yes	<input type="radio"/> No
Do you have "itchy and dry skin"?	<input type="radio"/> Yes	<input type="radio"/> No
Do you have "blurred vision"?	<input type="radio"/> Yes	<input type="radio"/> No

## The integrated super-OS interface

Stallios comes with a sleek and futuristic super-OS that acts as an optional interface for the web-3.0 AI infrastructure. It works on all devices, and you'll be able to play chess and checkers with Mayca, the super-AI. To play chess or checkers with Mayca, join Stallios and access the super-OS interface by clicking on the circle icon below your profile bio, and click on the game-pad. Once done, click on the user icon to close the interface. Start [here](#).

## The marketing plan

Stallios will hire a global marketing agency such as Ogilvy, to display advertising signs on bus shelters, buses, and subways, allowing people to access Stallios instantly simply by scanning a qr-code on the signs with their phone. We'll purchase banner advertisements online on all major social media platforms and popular sites. We'll also purchase TV ads similar to the one Apple used in the 1984 Superbowl to reach 100 million viewers to introduce its Mac computer.

## The market share

Regarding our targeted market, it's the entire internet population of 5.6 billion people. That will allow us to sell advertising campaigns to brands, and get a good share of this \$729 billion/yr market. Stallios also targets a good share of the global AI market of \$758 billion/yr, via Mayca, the super-AI assistant. Mayca is free for the moment, but later we will charge for it.

## The sales strategy

Stallios will sell global ads to brands via its advanced Ads Center, similar to Facebook ads. Our Ads Center is in production mode, and ready to serve brands globally. See a demo [here](#).

## The user traction

We have many new registrations of delighted users regularly, who tell us how impressed they are when they see the platform and all the features it has to offer. We also have many written reviews from software engineers who told us how impressed they are when they see all the complex engineering work that has been done on the platform. Stallios fascinates everyone.

## The competition

Stallios is a uniquely engineered super-platform that has no direct or similar competitors, a part of the internet itself. Obviously, we can still think of the popular social media sites such as Facebook, Instagram, Twitter, or LinkedIn. However, those platforms are not a real match to everything that Stallios offers as a web-3.0 AI infrastructure. In fact, Stallios has been engineered to consolidate those modern social media sites' features into one super-platform.

## The risks and challenges

Stallios has been successfully engineered, and it is now running in full production mode. Therefore, all the risks and challenges associated with product design and engineering are now non-existent. The other risks and challenges that we're now facing are related to the global launch of Stallios. We will hire many expert consultants in the marketing domain, in order to launch successfully.

## The staff and engineering team

Stallios Inc. was founded in Canada in 2013 by Marc Fortunat. A senior software architect and entrepreneur. Before founding Stallios, Marc studied and researched worldwide in software engineering and multi-modal AI for 25 years, with the goal of creating a web-3.0 AI infrastructure as a world wide web alternative. The company is now managed by an expanding group of very talented and experienced people, covering administration, business-law, and software design and engineering. Also, the company is currently in the process of hiring a solid team of 50,000 software engineers worldwide to create a workforce for the global expansion of Stallios.

## 5-year revenue forecast similar to Facebook

### Year 1

- Total Revenue: \$86.5 billion
- Advertising Income: \$72.3 billion
- Platform Subscriptions: \$8.2 billion
- Enterprise Solutions: \$6 billion
- Total Expenses: \$42.1 billion
- Net Cash Flow: \$44.4 billion
- Operating Margin: 51.3%

### Year 2

- Total Revenue: \$104.8 billion (+21% growth)
- Advertising Income: \$87.6 billion
- Platform Subscriptions: \$10.5 billion
- Enterprise Solutions: \$6.7 billion
- Total Expenses: \$49.3 billion
- Net Cash Flow: \$55.5 billion
- Operating Margin: 53%

### **Year 3**

- Total Revenue: \$128.9 billion (+23% growth)
- Advertising Income: \$107.2 billion
- Platform Subscriptions: \$13.4 billion
- Enterprise Solutions: \$8.3 billion
- Total Expenses: \$58.7 billion
- Net Cash Flow: \$70.2 billion
- Operating Margin: 54.5%

### **Year 4**

- Total Revenue: \$156.4 billion (+21.3% growth)
- Advertising Income: \$130.8 billion
- Platform Subscriptions: \$16.2 billion
- Enterprise Solutions: \$9.4 billion
- Total Expenses: \$69.4 billion
- Net Cash Flow: \$87.0 billion
- Operating Margin: 55.6%

### **Year 5**

- Total Revenue: \$189.7 billion (+21.3% growth)
- Advertising Income: \$158.5 billion
- Platform Subscriptions: \$19.6 billion
- Enterprise Solutions: \$11.6 billion
- Total Expenses: \$82.3 billion
- Net Cash Flow: \$107.4 billion
- Operating Margin: 56.6%
