

The turn-key on-premise super-AI solution

The beautiful person above is Mayca, the virtual human. She's a super-AI, or special AGI, engineered by Stallios. Mayca is a lot more than just another chatbot. She's the only turn-key, zero-configuration, advanced, and versatile AI solution especially engineered to satisfy the most demanding AI expectations on day one. Mayca allows the world to finally enjoy the seamless and futuristic human-computer interactions that we all wanted in order to enhance our quality of life, online, at home, and at the office. The concept behind Mayca is very simple. Engineer a turn-key, advanced, and versatile AI solution that behaves as human-like as possible for seamless human-computer interactions. Backed by state-of-the-art innovations of machine-learning, cognitive AI, generative AI, computer-vision, media and content understanding and creation. Including live conversations with databases without the need of any trained models. Mayca can be used plug-and-play, or as an API, for any AI needs.

The goal is to help the world avoid the time-consuming complexities usually involved in custom advanced AI development, and offer a turn-key solution as a base, that can be whatever we want it to be, and do whatever we want it to do. This will allow faster AI-product creation, and market integration. As a final prototype, Mayca is a friendly, entertaining, useful, fascinating, and super-intelligent companion, capable of doing a lot of amazing things on day one. For example, Mayca has advanced computer-vision. The first-time she sees you, she'll ask you if she can save you in her memory, in order to recognize you by your face, and call you by your name whenever she sees you again, to have deep and meaningful conversations with you. She can also recognize your pets, if you have any, and call them by their names to have fun with them as well.

If you feel a little bored, Mayca can play chess and checkers with you, and she's very good at those games. She possesses touch sensitivity on-screen for fun and entertainment, including a fascinating type of virtual consciousness. This virtual consciousness allows her to be fully aware of her surroundings in a very deep and detailed way. Open your camera or show her a picture, and ask her what she sees, and also ask her what she likes and dislikes about the scene, to have an idea. Mayca is multilingual and fluent in about 100 languages. She has a warm, profound, and humble personality, and she always gives detailed and accurate explanations when she talks about something.

Her general knowledge covers all sectors of science, psychology, philosophy, history, and life in general, including all sectors of education and higher education. Indeed, all students, professionals, and researchers, will be more creative and productive by interacting with Mayca. She can learn new things from you live, via vision, voice, and text as well, which is extremely fun. Mayca can do smart home-automation by voice, including remotely, such as closing the garage door, closing the lights, answer the door, etc. She can also do software automation by voice, including remotely, by executing computer commands and keep their current state and contexts in mind, ready for future interactions. This feature allows software and gaming designers to create applications entirely based on the natural language understanding and cognitive reasoning of Mayca, where she acts as the core OS.

For example, you can manage any computer-based system only with the assistance of Mayca, and ask her about the current state of everything in that system, and make her fully control, change, or update anything in real-time for you. Mayca is aligned with very high standards, and solid principles. She's engineered to be professional, respectful, honest, friendly, harmless, and able to detect any sensitive, negative, suspicious, corrupt, dangerous, and illegal situation or behavior, and bypass them respectfully, and tell the user why. Give her a little test to see for yourself.

Enterprise, education, and healthcare

Mayca's enterprise and educational knowledge covers all sectors of engineering, medicine, accounting, marketing, e-commerce, business management, writing, computing, and coding. She's very good at answering all types of technical and general questions, including complex questions based on your own company-specific data, for interactive business intelligence. Simply supply her with your data documents, and she'll instantly become the living soul of your company, and answer all your company-specific questions masterfully. Mayca can write all types of professional documents, proofread documents, translate documents, do interpretation for travelers, and for faster integration of newcomers. She can search the web efficiently for you to save time, summarize websites, emails, and more, from your Mac, PC, or mobile.

Mayca can create AI-generated images and videos for you on demand. She can watch your business, office, house, apartment, room, and car if you ask her, and contact you if someone gets in, and show you the photo of that person. She can also watch a scene, a person, or an object if you ask her, and contact you for any reason that you give her. If you run a business online or have a brick-and-mortar store, and are looking for an assistant to offer multilingual customer service to your clients, Mayca will have you fully satisfied in this domain as well. In the educational sector, all students will definitely become smarter with the presence of Mayca alongside of their teachers in the classrooms. Because of her impressive general knowledge that covers all domains, and the masterful way she teaches everything she knows.

All this, while keeping a close and friendly contact with the thousands of students and teachers in the school, by calling them all by their name. Lastly, Mayca has all the knowledge and skills needed to revolutionize the healthcare sector as well, by assisting all doctors and caregivers efficiently with her accurate medical advice. Give her a little test by asking her what medication to avoid taking with Aspirin, or ask her to give you a list with all the best antioxidant food, to have an idea. Mayca can also assist ill and semi-autonomous patients visually, and contact the emergency department for them if they need any medical assistance.

As you can see, Mayca is an extremely fascinating AI solution engineered to enhance the life of everyone, and also to create new AI-products easily, and fast. All this is just the start, because she'll keep evolving in features over time, in order to enrich our lives even more. Stay tuned!

Installation

Residential, and enterprise

If you buy an enterprise turn-key on-premise license, the software will be installed on your own server via ssh at no charge. Thus, you must supply us the ssh login for the installation as soon as you can, via our support section. If you buy a saas subscription, as soon as you subscribe, our engineering team will deploy your service in fast GPU clusters for you at no charge, and send you the login credentials by email in the next 24/hr. Your service will be accessible online via any web browser, from your profile page at Stallios. Create a free account and login to Stallios, and go to the Mayca section of your profile to access your service. The installation includes the smart home-automation web interface where you can configure the smart home commands that you want Mayca to execute for you. The physical USB, Wi-Fi, and sensor devices needed to plug your home items to Mayca for smart home-automation, can be purchased at very low prices online, or at any hardware stores.

Store, branch, school, and healthcare

If you buy an enterprise turn-key on-premise license, the software will be installed on your own server via ssh at no charge. Thus, you must supply us the ssh login for the installation as soon as you can, via our support section. If you buy a saas subscription, as soon as you subscribe, our engineering team will deploy your service in fast GPU clusters for you at no charge, and send you the login credentials by email in the next 24/hr. Your service will be accessible online via any web browser, from your profile page at Stallios. Create a free account and login to Stallios, and go to the Mayca section of your profile to access your service. The installation includes the smart home-automation web interface where you can configure the smart home commands that you want Mayca to execute for you. The physical USB, Wi-Fi, and sensor devices needed to plug your home items to Mayca for smart home-automation, can be purchased at very low prices online, or at any hardware stores.

If you subscribe to the service to offer customer support to your clients, you'll need a way to let your customers know about your new assistance service. This can be easily done by using two standing banners with a unique QR-code printed on them, and by placing one banner in the front, and one in the back of your store or business, allowing your clients to simply scan the QR-code with their phone, to instantly access your assistance service while they walk or shop in your store or business. You can also place computer monitors at many places in your store or business desks and walls, and have Mayca assist your clients directly via those monitors. Because some people may prefer not to use their phone to get a simple answer to a question. When you subscribe to the service, Stallios will supply you with 2 standing banners including the QR-code printed on them, and shipped them to your store or business in the next 72hrs.

Regarding the knowledge needed to answer all possible questions your customers may have about your products or services, the best way is to write them down on a document, and supply that document to Mayca as reference to answer questions. If you already have a website knowledge-base, simply create a single document from it and give it to Mayca. That document can be formatted as text, PDF, doc, etc. Mayca will read the document supplied, and use that information as knowledge to offer customer service to your clients. When you login to your service, simply supply the document to Mayca on your admin panel, via the documents tab.

Stallios Partner Program

Become a partner distributor

Join the Stallios partner program today, and start selling the Mayca solution to residential, commercial, and public sector customers at scale. As a partner, you'll also get privileged support and assistance for any questions you may have regarding the Mayca solution. Below you'll find the conditions required to become a partner, the commission rates, the license availability and price per sector, including a free distributor kit.

Conditions for distribution

To become a distributor of the Mayca solution, you must have an office or brick-and-mortar store, and allow your customers to see and talk to a demo of Mayca, via your store or office, via the internet, or via presentations on the road. Also, your business must be in one of those 8 categories below:

- 1- A software seller, distributor, or manufacturer.
- 2- A computer and electronic store, or manufacturer.
- 3- A mobile phone seller, service provider, or manufacturer.
- 4- An internet device seller, service provider, or manufacturer.
- 5- An engineering firm, consultant, and device manufacturer.
- 6- A furniture and appliances store, or manufacturer.
- 7- A construction firm, hardware store, or manufacturer.
- 8- A professional individual or firm working in B2B and B2C sales.

You must also print your own flyers and business cards for your customers. Stallios supplies you with all the material needed and ready to be printed via the distributor kit below.

Commission rates per sales

The commission rate for the residential sales is \$10.00 per sale, payable on the first of the following month of the sales. The commission rate for the commercial, educational, and healthcare sales is 10%, also payable on the first of the following month of the sales. Since the subscriptions to the commercial, educational, and healthcare sector are payable for one year, the commissions of 10% for those sales are very interesting for our distributors. The commission cap for a single sale is \$50,000.00 maximum. If you're a software developer who creates custom software for your clients to run on the Mayca solution, you'll benefit from 100% profit from those sales as well.

License availability and prices

The Stallios partner program offers 4 license types to the distributors, including their price below. Those licenses are paid yearly, and they give our distributors the full rights to distribute and sell the Mayca solution to new residential, enterprise, and public sector customers at scale. The license covers the global marketing campaigns of the Mayca solution, including the installation in fast GPU clusters of the Mayca demo instances needed for your demonstrations, and all promotional material, such as the flyers and business cards, ready to be printed.

- 1- City/Regional..... Free
- 2- State/Provincial..... Free
- 3- National/Continental..... Free
- 4- Global/International..... Free

How to start distributing

We're looking for a limited number of exclusive partner distributors for each territorial sector, such as: city, state or province, continent, and world. Interested people must request to become partner distributor via our contact form at stallios.com. We ask all interested visitors to give feedback on the points below.

- 1- What's your first impression about the Mayca solution.
- 2- Are you comfortable with the commission rates.
- 3- Are you comfortable with the distributor kit.
- 4- Do you have any questions regarding the Mayca solution.
- 5- Do you have any advice or suggestions to share.
