New message from Richard Ndisya

Software Engineer · Remote

Hi Stallios Team,

Thank you for getting in touch and for the opportunity to explore your platform. After signing up and interacting with Stallios, I'm genuinely excited by the product's vision: a unified space for creators that merges media, apps, games, and social collaboration.

As a full-stack engineer with experience in React, Vue, Spring Boot, RESTful APIs, and scalable backends, I see immense potential to contribute to your team. The AR-powered recording tools, app embedding, and creator monetization flows reflect a complex but exciting technical challenge, exactly the kind of problem I enjoy working on.

One improvement I'd love to help with is optimizing the AR media recording tools by implementing progressive loading for filters, and debounced rendering to enhance performance on low-spec devices. On the backend, chunked media uploads and caching popular assets could reduce latency and improve creator UX significantly.

I'm confident in my ability to enhance Stallios' platform through thoughtful architecture, performance tuning, and seamless UI/UX enhancements. I'd love the chance to discuss your tech stack and share how I could contribute to your roadmap.

Please let me know if there are any technical assessments, sample tasks, or follow-ups you'd like from me.

Looking forward to the possibility of joining your mission to empower creators globally.
